

CLAIMS

1. Card comprising a body with a precut microcircuit card, characterized in that a token is also
5 precut in the body of the card next to the microcircuit card.

2. Card according to claim 1, characterized in that the token extends to a corner of the card body.

3. Card according to claim 2, characterized in
10 that the token extends to only one corner of the card body.

4. Card according to claim 3, characterized in that the token extends to the corner at the greatest distance from the card body.

5. Card according to claim 3 or claim 4,
15 characterized in that the token has sides at least approximately parallel to those of the card body.

6. Card according to claim 5, characterized in that the token has sides at least approximately aligned
20 with the sides of the microcircuit card.

7. Card according to any one of claims 1 to 6, characterized in that the card body conforms to the ID-1 format.

8. Card according to any one of claims 1 to 7,
25 characterized in that the microcircuit card conforms to the ID-000 format.

9. Card according to any one of claims 1 to 8, characterized in that the token carries visual information.

10. Card according to any one of claims 1 to 9,
30 characterized in that the token includes a magnetic strip for storing information.

11. Card according to any one of claims 1 to 10,
35 characterized in that the token includes a hole through which a key-ring may be passed.

12. Card according to claim 11, characterized in that the hole is in a corner of the token in the vicinity of the microcircuit card.

5 13. Card according to any one of claims 1 to 12, characterized in that the token is connected to the remainder of the card body by mechanically weakened areas consisting of grooves.

10 14. Card according to any one of claims 1 to 13, characterized in that the token is of the contactless type.

15. Card according to any one of claims 1 to 13, characterized in that the token is a radio-frequency identification label.
